AD Project Team -6

Read me Document:

Step – 1 : Import the Data Base file in to the Sql server. Which provided in the folder
With file name: 'ADTEAM.bak'.

Step -2 : Now open the logic university in visual studio. Then Open 'DataBase' folder in that open 'DataLink' class and update the "connectionstring" as in the below format. And also change the Server name of your SQL Server management Studio.

```
connectionString = "Server=DESKTOP-CCUEBU9;" + "Database=ADTEAM;" + "Integrated Security=true";
```

Step -3 : Now run the Code by pressing Ctrl+f5.

Step-4: In order to run the Web , right -click on the solution 'set startup project' to "LogicUniversityWeb".

Provide the user credentials.

Username: rep1. (Role of this user is Department representative)

Password: test9. (default password for all users).

Step -5: Please refer to Data base table "Users" for different users name and roles.

Step-6: In order to run the API , right -click on the solution 'set startup project' to "LogicUniversityAPI".

Step -7: Check your server name is changed to "127.0.0.1". if not please change the name of server to 'local host' to '127.0.0.1'.

Step -8 : now login with same credentials same as the web.

Default password for all users is 'test9'.

Note: Android app is only for the Department Head and Department staff, Store Clerk
